

Setting up the project Backend API, with Laragon (a software that provides PHP environment) on Windows.

- Step 1: Install Laragon (PHP, MySQL, Composer) from the official website:
<https://github.com/leokhoa/laragon/releases/download/6.0.0/laragon-wamp.exe>.
Then open Laragon and follow steps: Mostly next, next, finish.
- Step 2: Start Laragon & Install Composer Dependencies:
Start Laragon if it's not already running. Icon in the system tray.
Click "Start all" then click "Terminal" button from Laragon User Interface, then run these CMDs:

```
c:\laragon\www
git clone https://github.com/MDSHAKHAWAT65/game\_review\_backend.git
c:\laragon\www\game_review_backend
composer install
cp env.example .env
```

- Step 3: Create Database:
Click the "Database" button from the Laragon User Interface.
Click "Open" to open the database User Interface.
Right Click on "Laragon" from top left corner Create new->Database -> enter
"game_review_app_db" -> click OK.
- Step 4: Run the application:
Run these CMDs:
php artisan migrate
Php artisan db:seed
php artisan serve
- Step 5: Access the application:
Open web browser and visit: <http://localhost:8000>
